Natural Lake Biosciences Case Study 2023

Niceville, FL

BEFORE

This is Hickory Lake in Niceville, Florida. The date is August 22, 2023. I was contracted for a one-time treatment on this pond for slender spikerush, bladderwort, spatterdock, torpedo grass, and algae. I used a mixture of herbicides that included diquat, chelated copper, glyphosate and pondzila pro.

AFTER

This is Hickory Lake on September 13, 2023. My herbicides accomplished the task of killing the target species of aquatic vegetation. The pondzilla pro has also done its job to breakdown and dissolve the dead algae and aquatic vegetation. Our one time applications depend on getting these results of clean water with no dead, matted, decaying, materials. Pondzila Pro makes this possible.
